

Mini is in-Spring force PCB terminal in IC-size

Available in June 2012: PTSM Print terminal in white

Print terminal block with Push-In technology for SMD and THR applications

New applications require innovative connection technologies. Especially the growing LED-lighting sector has special needs for small connection solutions. Along with a height of only 5 mm the new PTSM print terminal block contains a full spring force connection technology. The terminal blocks are available for SMD and THR processes and offers cross-sections up to 0,75mm². In June 2012 the new colour variants in white are available.
